

Documentation: Celia and Luisas Art Museum

Initial sketches

Initial sketch of the exhibition hall:

Intermediate demo with reactive bees → reacts after being pressed with mouse-button

Development process

We played around with loads of different ideas. Our initial idea was to create a random environment with interactive bits. The idea was that when interacting with certain pieces, a mini game would pop up. Throughout different mini games the

player would then collect trophies. The goal would then have been to collect a certain number of trophies to end the game.

Afterwards we had the idea of making the environment an art museum. From there on we decided to make the game an informational one with only one mini game (a quiz) in the end. Now the goal of the game is to collect knowledge to kind of “escape” the museum. Despite the game being less about the game now but more about learning something, we tried to keep our little info-boxes as fun as possible :)

Challenges

Our first sketch of the exhibition hall had paintings on the right and left wall that were distorted so it didn't look good. It was also a challenge to make those paintings interactive. The interactive bit always exceeded the paintings borders so when clicking next to the painting, the code would still react. To fix this we replaced those paintings with windows and decided to only keep the paintings in the back.

Another initial challenge was to remove the background from the character. Our “character” is a magnifying glass and we wanted it to be see through. This was fixed by removing the background of the drawing in the app that was used for the drawings.

Future improvements and known limits

The game is quite straightforward with not many options for the player to explore. It could be a future idea to include some jokers for the quiz (which could be collected through small games in the exhibition hall and used during the quiz).

Right now, the cafe is not interactive at all and just meant as a game-over screen. Adding interactive elements there could also be a future point of interest.

Division of work

For this project Celia created all of our drawings, researched the information for the paintings and wrote the informational texts and quiz questions, while Luisa rather focused on the code with exception for the quiz and adding the cafe.

While working both stayed in touch and assisted one another if issues arose.

References

The information texts for each painting were gathered from different sources, listed below. The paintings itself were generated with an AI ChatBot (Gemini), based on the three self-painted images by Celia which were given the AI as a reference in terms of style.
